.1.06.156 on XP but when i open the spreadsheet i cant edit the columns or rows A: This error means you are trying to edit a column or row that is read-only. Some columns or rows are locked by SAP. You cannot edit these. To read-only a column or row in any spreadsheet, right click the desired cell and click Lock. Q: Does re-using food affect the rate of digestion and the rate of calorie burn? I have been eating food that I cooked earlier in the day. I usually wait for it to cool to eat it and if I can't eat it right away, I will refrigerate it for a day or two. Recently, I noticed that I am not digesting my food as well as I used to. That is, there is a noticeable delay before I can feel the effects of my food consumption. I would like to know if eating food that you have recently cooked affects the rate of digestion in any way? I am most interested in this from the perspective of the caloric burn. The best known way that the amount of food you eat affects how well you digest it is the amount you eat. There's also the amount of food you eat, and the time of day you eat it. That is, if you eat a big meal in the morning, you're likely to have a harder time digesting it and burning its calories, than if you eat a smaller meal at lunchtime. Another way is that if you eat a good meal of protein, fat, and carbohydrates, you burn more calories than if you eat a good meal of mostly carbohydrates, or mostly fats. These are not the only ways that the food you eat affects your metabolism, but they are the most studied. The present invention relates to a method of manufacturing an article by transferring an image of one surface of a first article onto a second article. The first article may be a glass sheet and the second article may be an opal glass sheet. An article such as an

optical element having an uneven surface made of an opal glass can be manufactured by molding a surface of the opal glass, and then transferring an image of one surface of the mold onto the opal glass. In this case, the surface of the opal glass, the molded surface of the mold, and the transferred image of one surface of the mold are transparent. Japanese Patent 82157476af
